

Where reel safety matters

Welcome to Aquatic

Aquatic, an Acteon company, is the leading independent operator of full powered reel and tensioner solutions for the global oil and gas industry. With more than 30 years' experience in off and onshore installations, transpooling, recovery and decommissioning works, we

work with our customers adapting our equipment and solutions to meet their needs.

Our marine facility in Peterhead, Scotland is a centre of excellence for anything reeled – however we do more than just supply reels.

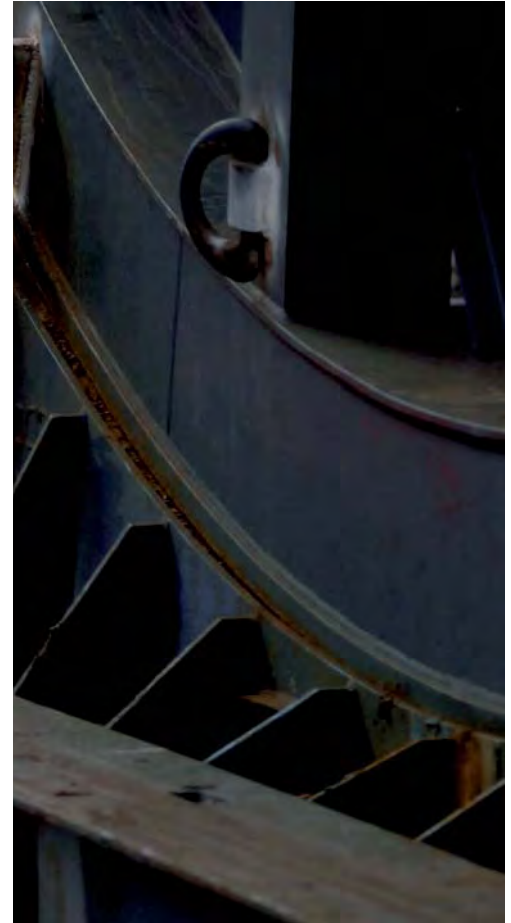

Much, much more...

Modularity and flexibility

The biggest challenge for any equipment and service provider is speed of delivery. We have a comprehensive range of modular, flexible equipment that is available to be transported anywhere in the world. Our equipment can be dismantled to fit

into standard shipping container (40ft/12m), enabling Aquatic kit to be installed on, if needs be, relatively small vessels of opportunity from more economical quayside locations. An ideal solution to the problems of logistics and cost faced by

operators as it provides faster mobilisations and demobilisations. Our reputation has grown in part because we minimise vessel downtime thereby reducing the project cost to the end customer.

Professionally designed vessel specific sea fastenings are essential for safe and effective operations

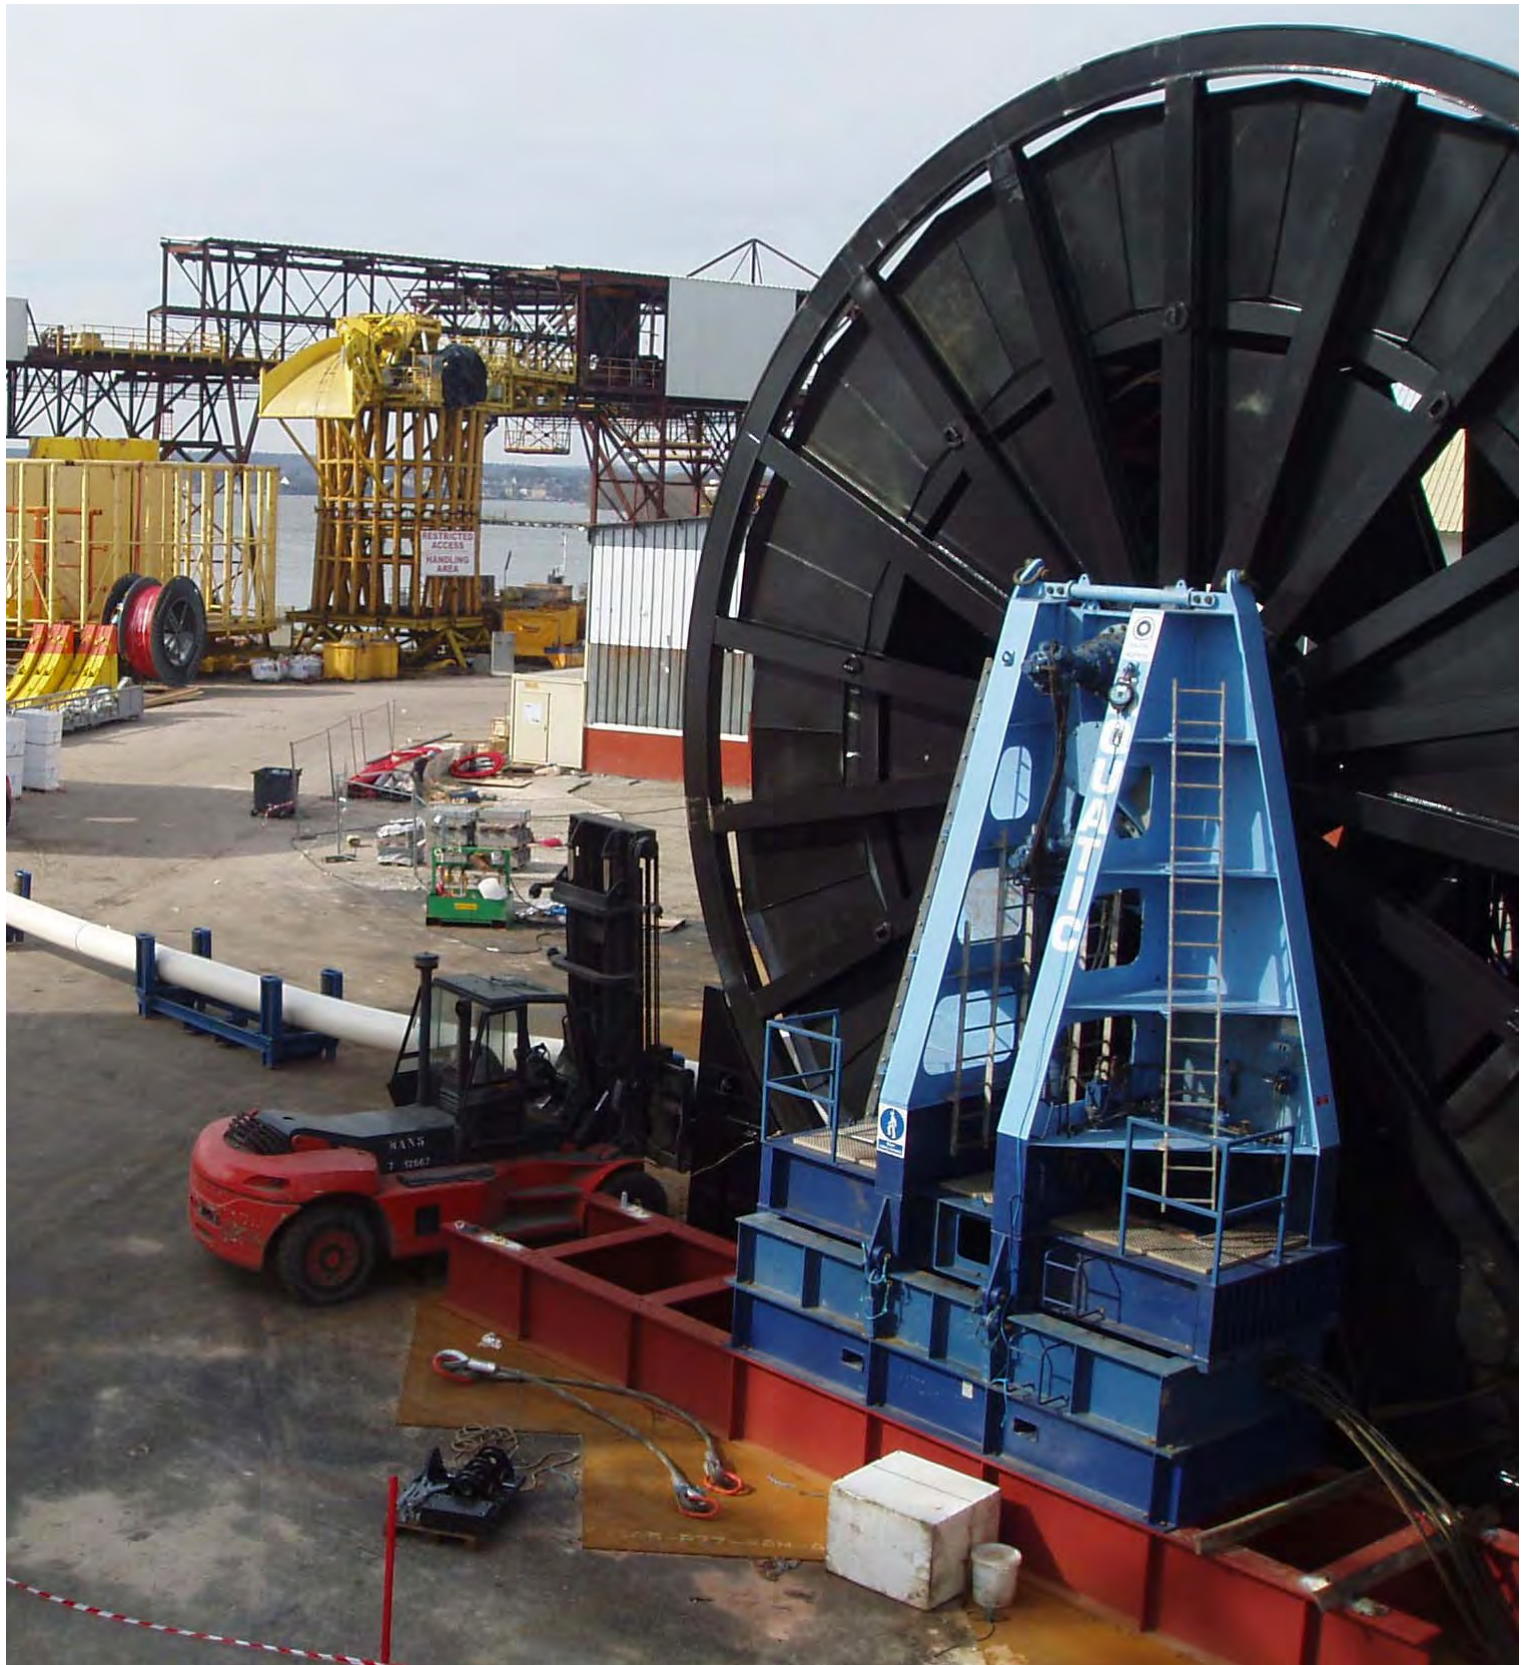

Reliability with integrity

We have an extensive range of equipment for the installation and spooling of flexible flowlines, umbilicals, cables, wire ropes and coil tubing. Our capability ranges from small winches to 11.4m diameter reels and our AQPR-02G-500 drive system has a 'reel plus product' capacity of 500Te, enabling us to provide tailored solutions to all spooling requirements.

With our custom built workshop and yard facility we offer complete storage, inspection and management services for spare pipeline and umbilical products and reels.

Aquatic's engineering team performs a wide range of activities from conceptual studies to detailed analysis work, however, the primary function of

the department is to provide technical support for equipment operations and projects. Whilst we fabricate a large proportion of our equipment in-house, we also have a global network of strategic partners, which we can leverage, to build to our specification; this means we are able to concentrate on what we are best at.

AQPR-02G-500 can handle 500 tonnes of reel weight and can generate up to 150 Te.m of torque

Working as an independent operator

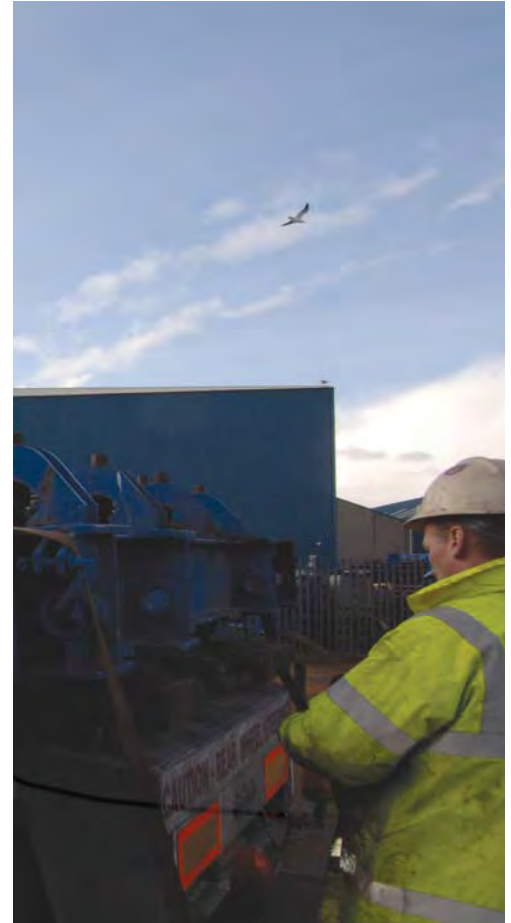

We are the leading independent operator of powered reels for the global oil and gas industry working across Europe, Asia, Africa and America. We are proud of the reputation we have built up over three decades, for responsive and

straightforward project management across the globe. Our offshore teams have acknowledged commitment and have built enviable reputations for seamlessly integrating with our host marine crews. Wherever you are working, teamwork is critical.

A global reputation

We have a strong reputation for expertise in project delivery and innovation in engineering. We offer full project management services for subsea tie-backs and product installation, with projects being managed from initial planning

through to pre-commissioning and handover. Our project management team provides a highly responsive service that is able to interface with customers, contractors and third parties, to enhance the project's success.

Bringing the mobilisation to the vessel enables maximum operational time

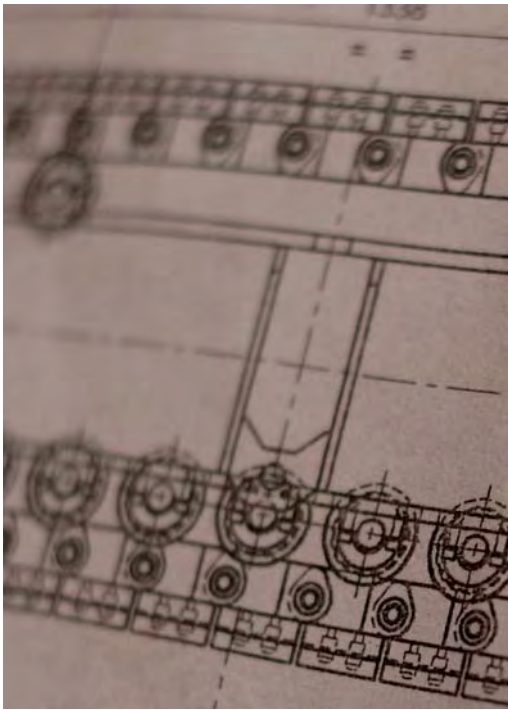

Corporate and social responsibility

Aquatic implements, maintains and strives to improve an Integrated Health and Safety, Environmental and Quality Management System (IMS). The IMS framework assists us in providing a safe place to work, having respect for the environment and the ability to

execute customer focused operations that consistently achieve customer requirements and generates satisfaction. Aquatic has now received Safety Management System (SMS) certification to OHSAS 18001. Overall we are in possession of

certifications that are of key importance for our business and for our customers:

Quality - ISO 9001
Environmental - ISO 14001
and Safety - OHSAS 18001

The AQT-10C-50 tensioner is a 4-tracked caterpillar track system capable of over a 50Te line pull

Our reputation has developed from our ability to design and build bespoke solutions from our custom built workshop and yard facility

Delivering innovative technology

We focus on designing, building and leveraging innovative technology to match expectations and by bringing our expertise to 'any vessel' we are able to deliver projects on time and on budget.

If we are proud of any one particular statistic, it is this. We re-invest between 25-30% of our revenue in new equipment and technology; the net result is that we are able to handle multiple projects simultaneously.

As part of our impressive asset list we have developed a deep water installation lay-ramp and best-in-class 50Te tensioners, enabling us to better service our customer's needs in deep water.

About Acteon

To complement our in-house portfolio we are able to draw on the skills, expertise and financial strength of the collective resources within the Acteon Group. Learn more about Acteon at www.acteon.com
